Overview  
Our work  
Our ask

# Overview

## Our work

## Our ask

## THE PROBLEM

Getting good,  
reliable data is hard.

## ANOTHER PROBLEM

Getting data from  
different sources makes  
this even harder.

- Aligning incentives
- Translating between data formats
- Specifying data standards
- Driving adoption of standards
- Making data collection user-friendly
- Implementing reliable validation

**federated data effort**

# federated data effort

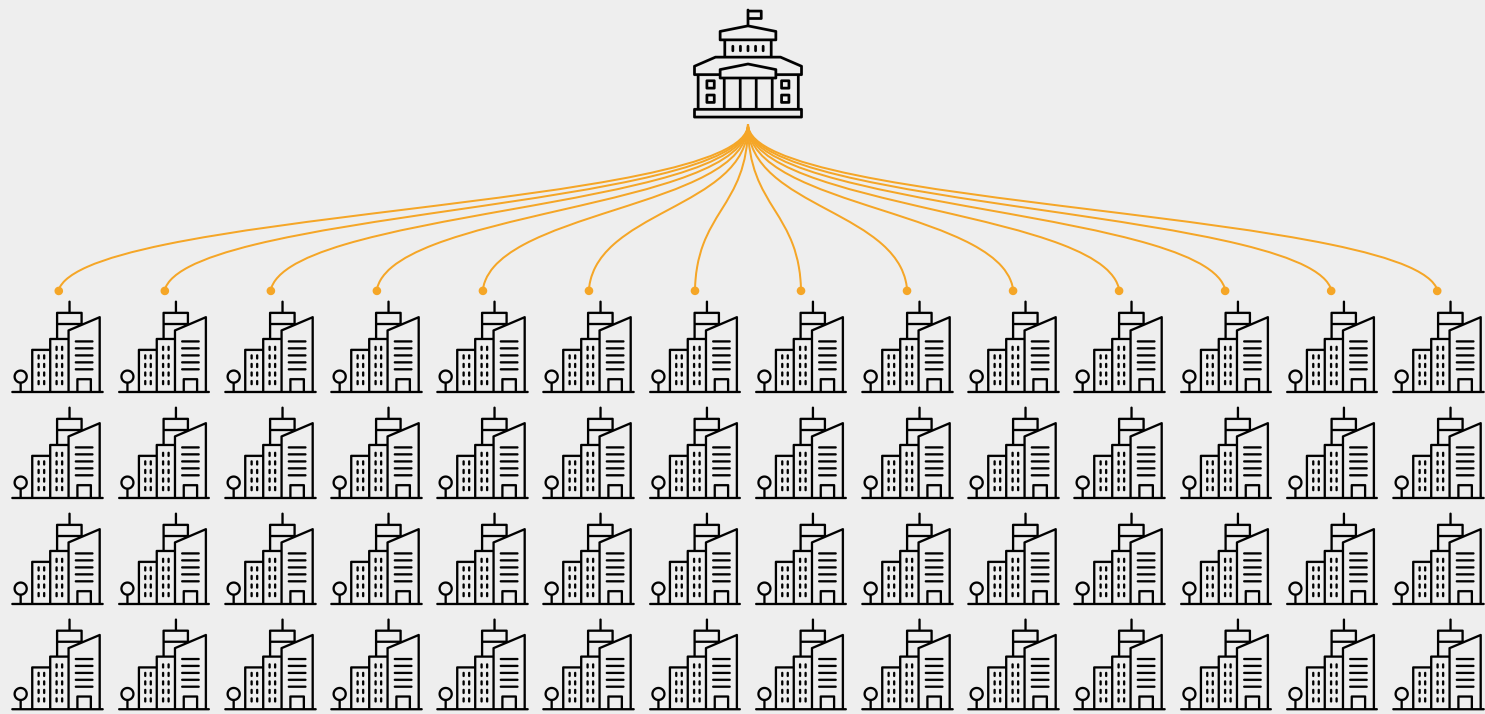

effort in which a **common type of data** is  
collected or exchanged across  
**disparate organizational boundaries**

In our distributed style of  
government, this happens  
**all the time.**

- Shape policy
- Inform budget decisions
- Track program performance
- Support operational efficiencies
- Make available to 3rd parties

Google Dataset Search

Philip

### Catalog Fields

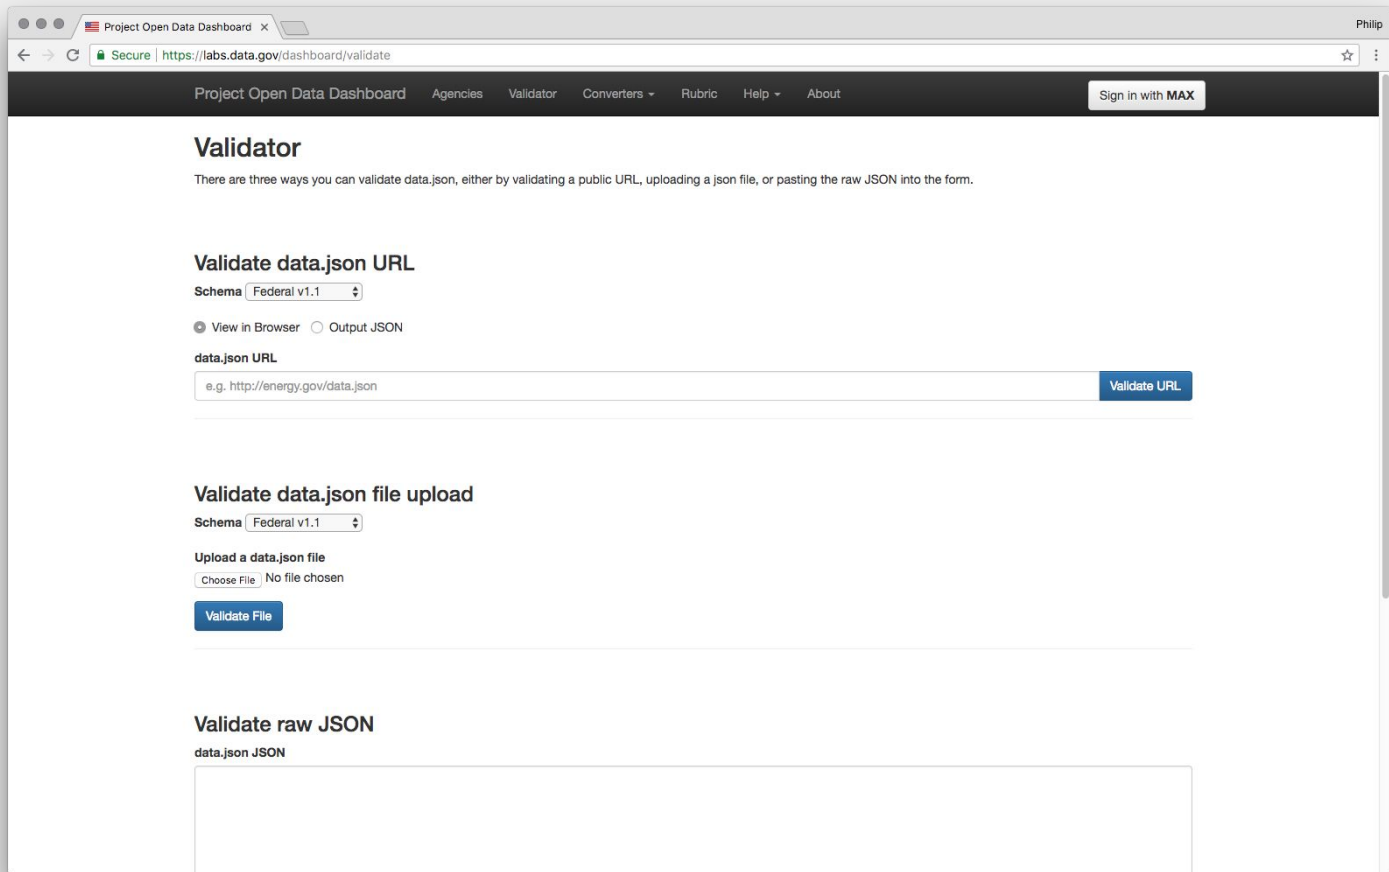

These fields describe the entire Public Data Listing catalog file. Publishers can also use the `describedBy` field to reference the default [JSON Schema](#) file used to define the schema (<https://project-open-data.cio.gov/v1.1/schema/catalog.json>) or they may refer to their own JSON Schema file if they have extended the schema with additional schema definitions. Similarly, `@context` can be used to reference the default [JSON-LD Context](#) used to define the schema (<https://project-open-data.cio.gov/v1.1/schema/catalog.jsonld>) or publishers can refer to their own if they have extended the schema with additional linked data vocabularies. See the [Catalog section](#) under [Further Metadata Field Guidance](#) for more details.

Field	Label	Definition	Required
<code>@context</code>	Metadata Context	URL or JSON object for the <a href="#">JSON-LD Context</a> that defines the schema used.	No
<code>@id</code>	Metadata Catalog ID	IRI for the <a href="#">JSON-LD Node Identifier</a> of the Catalog. This should be the URL of the data.json file itself.	No
<code>@type</code>	Metadata Type	IRI for the <a href="#">JSON-LD data type</a> . This should be <code>dc:Catalog</code> for the Catalog.	No
<code>conformsTo</code>	Schema Version	URI that identifies the version of the Project Open Data schema being used.	Always
<code>describedBy</code>	Data Dictionary	URL for the <a href="#">JSON Schema</a> file that defines the schema used.	No
<code>dataset</code>	Dataset	A container for the array of Dataset objects. See <a href="#">Dataset Fields</a> below for details.	Always

### Dataset Fields

See the [Further Metadata Field Guidance](#) section to learn more about the use of each element, including the range of valid entries where appropriate. Consult the [field mappings](#) to find the equivalent v1.0, DCAT, Schema.org, and CKAN fields.

Field	Label	Definition	Required
<code>@type</code>	Metadata Type	IRI for the <a href="#">JSON-LD data type</a> . This should be <code>dc:Dataset</code> for each Dataset.	No
<code>title</code>	Title	Human-readable name of the asset. Should be in plain English and include sufficient detail to facilitate search and discovery.	Always
<code>description</code>	Description	Human-readable description (e.g., an abstract) with sufficient detail to enable a user to quickly understand whether the asset is of interest.	Always
<code>keyword</code>	Tags	Tags (or keywords) help users discover your dataset; please include terms that would be used by technical and non-technical users.	Always
<code>modified</code>	Last Update	Most recent date on which the dataset was changed, updated or modified.	Always
<code>publisher</code>	Publisher	The publishing entity and optionally their parent organization(s).	Always
<code>contactPoint</code>	Contact	Contact person's name and email for the asset.	Always

# Data integration models in other governments

## **Enterprise Service Bus**

(centralized, not very scaleable)

## **National Interoperability Framework**

(distributed, more scaleable)

## THE CORE PROBLEM

Federated data efforts  
haven't had adequate  
infrastructural support.

## THE GOAL

Make managing  
federated data efforts  
in government easier

## THE APPROACH

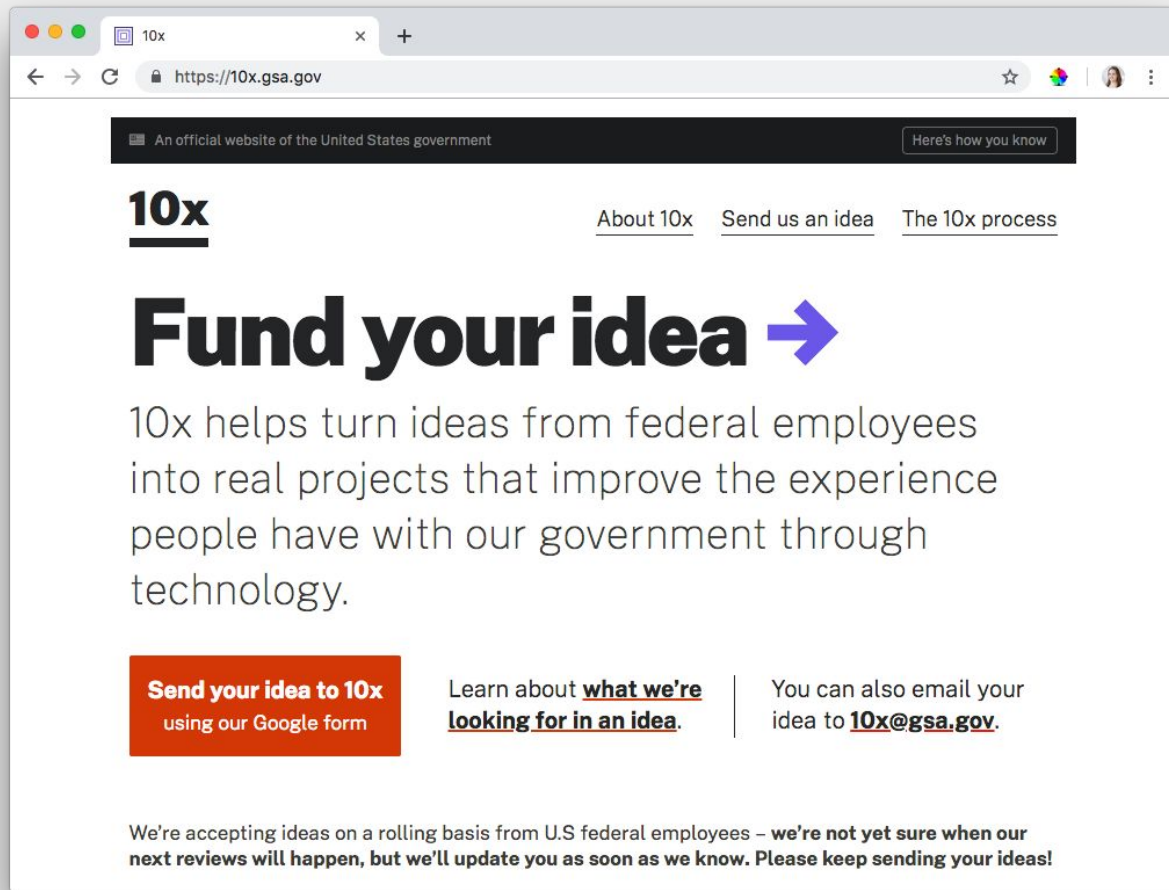

- Develop reusable tools
- Document and share repeatable processes

## The Data Federation Maturity Model

Julia Lindpaintner edited this page on Mar 8 · 1 revision

The following was originally published as part of the [Data Federation Framework](#) from Phase 1 of this project.

### The Data Federation Maturity Model

Successful execution of a federated data effort is largely a question of incentives and resources. Developing, and complying with, a new process or specification for data submission takes considerable time, effort, and expertise, and will only be possible to sustain with a large number of motivated individuals who have both the ability and the capacity to execute on a long term vision. However, it is difficult, and unwise, to immediately allocate vast resources to a new federated data effort — the effort may be easier than anticipated, or harder, or impossible, for a variety of reasons. We have observed that the most successful of these efforts simultaneously and iteratively develop the maturity of the effort along four axes: Impetus, Community, Specification, and Application. If done properly, these four dimensions work in concert to create a virtuous cycle of more participation, enthusiasm, and resources allocated to the project over time.

Dimensions	Beginnings	Growth	Mature
Impetus	Grassroots	Policy	Law
Community	First Adopters	Trending	Maintenance
Specification	Dictionary	Machine Readable	Standardized
Application	Alpha	Beta	Production

## The Data Federation Playbook

Julia Lindpaintner edited this page on Mar 8 · 2 revisions

The following was originally published as part of the [Data Federation Framework](#) from Phase 1 of this project.

### The Data Federation Playbook

The following nine plays are drawn from our interviews with successful federated data efforts. They are intended to provide highlights of what project teams recall as being essential to the success of their project. It's unlikely that any effort will be able to execute on all plays, but if you are undertaking a new federated data effort, it will greatly improve your chance of success if you have a few of these plays in motion.

### Policy Should Be Focused on Processes and Outcomes, Not Implementation

The details of implementing an open data standard must be able to be adapted by project teams on the fly to meet the needs of the owner and user communities. Don't specify technical details in policy or law, instead focus on goals and processes used to achieve those goals (e.g., developed iteratively with user feedback, or must develop a machine-readable data standard).

### Identify Use Cases With Demonstrated Demand

When prioritizing whether or not to invest in a federated data effort, seek out ways to prove demand. Are citizens or media frequently requesting a certain type of data? Is there already a community built around data, or planning to use a certain type of data? Talk with your cell partners

**PHASE TWO: April–June 2018**

**Pick a use case &  
build a prototype**

We partnered with the  
Food & Nutrition Service (FNS)

USDA

Department of Agriculture, Food and Nutrition Service  
**School Food Authority (SFA) Verification Collection Report**

State agencies must report the information on this form ANNUALLY for each SFA with schools operating the National School Lunch Program (NSLP) and/or the School Breakfast Program (SBP).

All SFAs, including SFAs with all schools exempt from verification requirements, must complete applicable sections.

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number. The valid OMB number for this collection is 0584-0026. The time required to complete this information collection is 45 minutes per response, including the time to review instructions, search existing data resources, gather the data needed and complete and review the information collection.

<b>State Agency Name:</b>	<b>SFA ID#:</b>	<b>Type of SFA:</b> <input type="checkbox"/> Public <input type="checkbox"/> Nonprofit/Private	<b>School Year:</b> <b>From:</b> 20 <b>To:</b> 20					
<b>SFA Name:</b>		<b>SFA City:</b>	<b>SFA Zip code:</b> <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px;"></td><td style="width: 20px; height: 20px;"></td></tr></table>					

Section 1	Total Schools, Residential Child Care Institutions (RCCIs) and Enrolled Students	<b>**All SFAs must report Section 1**</b>		A. Number of Schools OR Institutions	B. Number of Students
		1-1: Total schools (Do not include RCCIs):		<b>1-1A</b>	<b>1-1B</b>
		1-2: Total RCCIs (Do not include schools counted in 1-1):		<b>1-2A</b>	<b>1-2B</b>
		1-2a: RCCIs with day students (Report ONLY day students in 1-2aB):		<b>1-2aA</b>	<b>1-2aB</b>
		1-2b: RCCIs with NO day students:		<b>1-2bA</b>	<b>1-2bB</b>

Section 2	SFAs with schools operating alternate provisions	<b>**ONLY SFAs with alternate provisions must report Section 2**</b>		A. Number of Schools AND Institutions	B. Number of Students
		2-1: Operating Provision 2/3 in a BASE year for NSLP and SBP:		<b>2-1A</b>	<b>2-1B</b>
		2-2: Operating Provision 2/3 in a NON BASE year for NSLP and SBP:		<b>2-2A</b>	<b>2-2B</b>
		2-2a: Provision 2/3 students reported as FREE in a NON BASE year:			<b>2-2aB</b>
		2-2b: Provision 2/3 students reported as REDUCED PRICE in a NON BASE year:			<b>2-2bB</b>
		2-3: Operating the Community Eligibility Option:		<b>2-3A</b>	<b>2-3B</b>

**PHASE THREE: December 2018–May 2019**

**Make it real &  
make it last**

# In Phase 3, we are going both deep and broad

- Set FNS up for success
- Demonstrate reusability of the tool with other use cases and data sets

- Identify other opportunities for reusable tooling or repeatable processes
- Develop a plan to sustain this project beyond 10x funding

Overview

Our work

Our ask

## THE APPROACH

- Develop reusable tools
- Document and share repeatable processes

**WE STILL NEED TO LEARN MORE ABOUT**

Challenges facing federated data efforts

---

Opportunities for tools & resources

- Aligning incentives
- Translating between data formats
- Specifying data standards
- Driving adoption of standards
- Making data collection user-friendly
- Implementing reliable validation

## YOU CAN HELP

Share data- and rulesets with us

---

Let us know about other one-off  
validation tools that exist
